PI simulation complete — press Replay to present the result

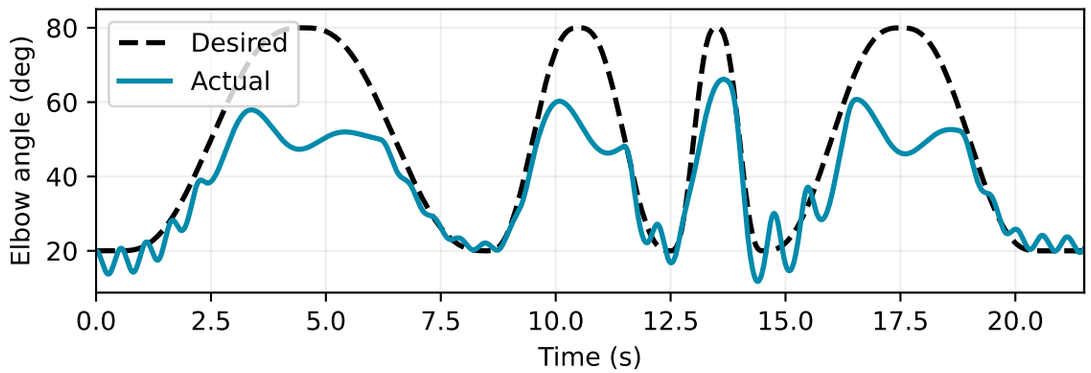

Dumbbell: 2 kg | PI: Kp=30, Ki=15 | Kd=0 (no derivative) | Kv=0

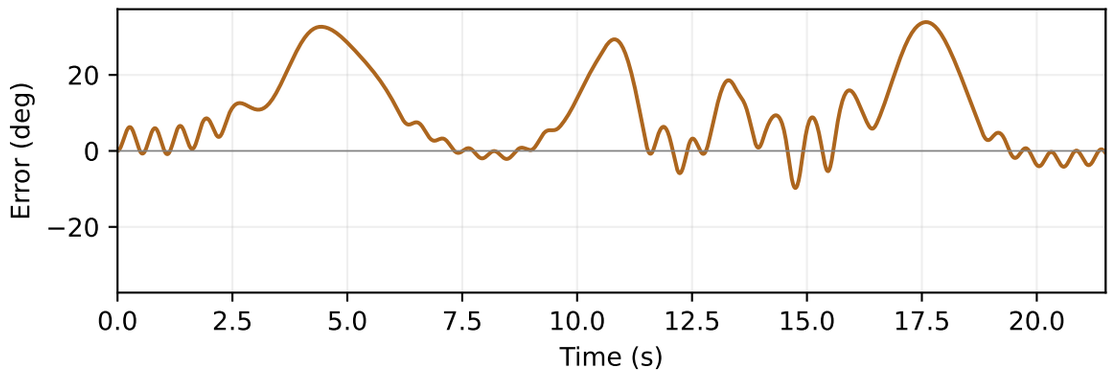

Force cap: 80 N | Controller step: 0.01 s | Angle: 20 to 80 degrees | Muscle excitation: 0.01

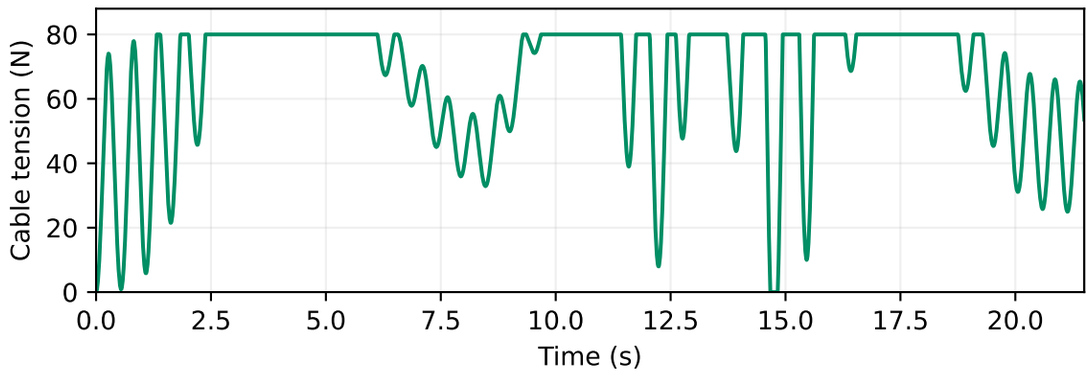

Leg times (s), alternating lift/lower: 4, 4, 2, 2, 1, 1, 3, 3

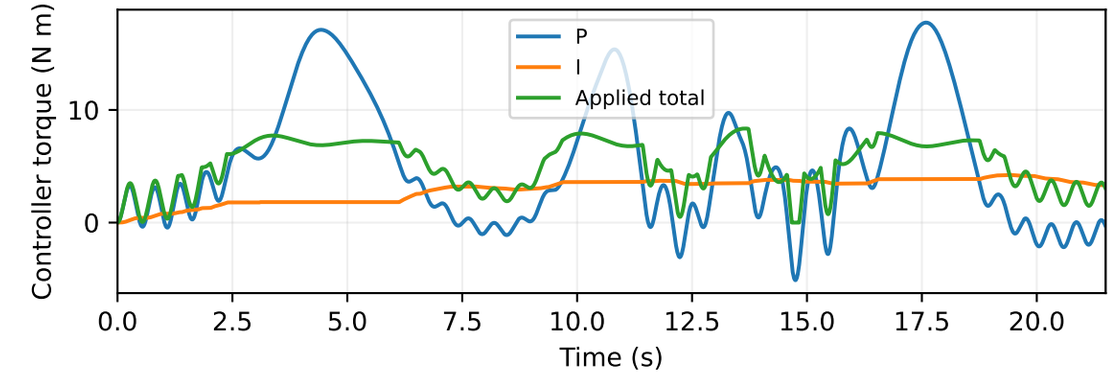

LIVE | t=21.50 s | FINAL HOLD | cycle 4 | leg 0 s

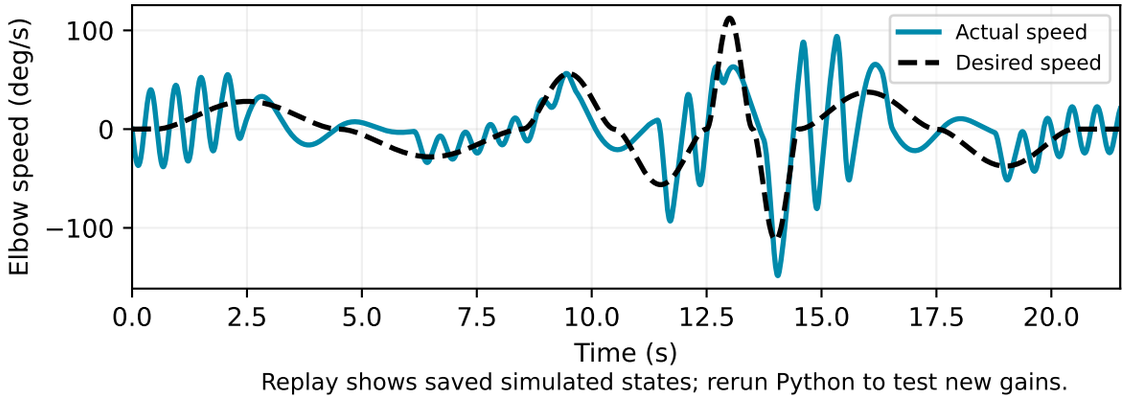

Speed: desired +0.0, actual +20.5 deg/s | error -0.7 deg | force 53.6 N | within force range

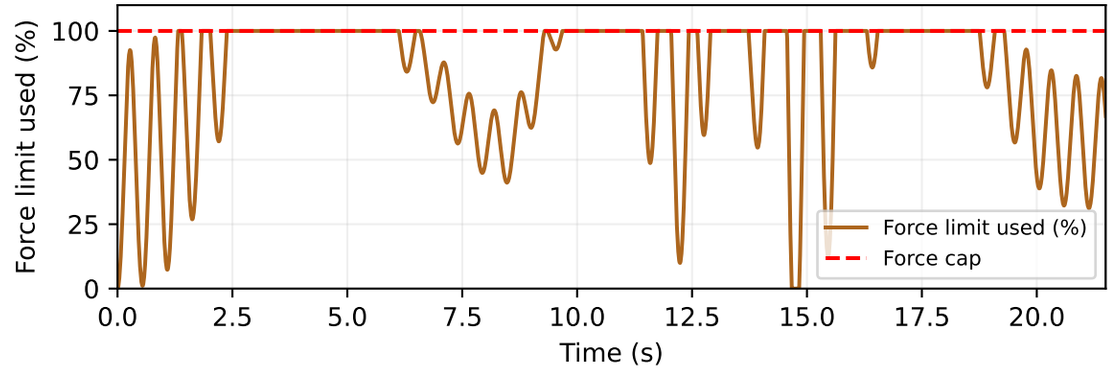

Replay shows saved simulated states; rerun Python to test new gains.
