PI simulation complete — press Replay to present the result

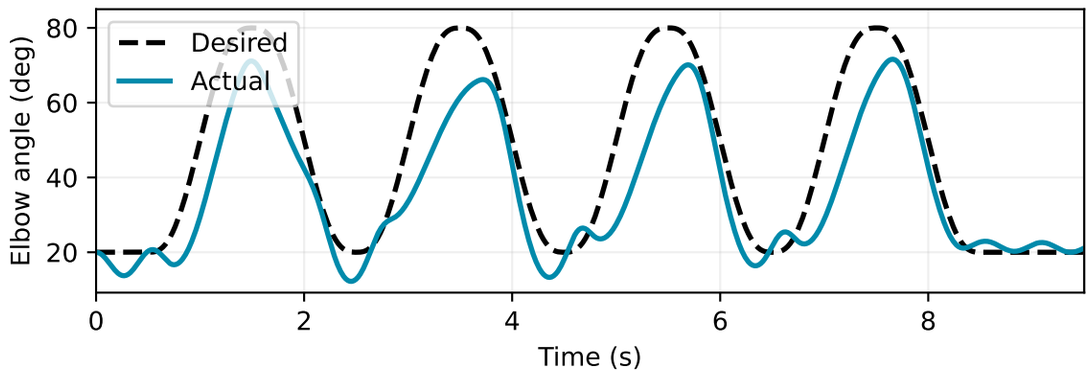
Dumbbell: 2 kg | PI: Kp=30, Ki=15 | Kd=0 (no derivative) | Kv=0

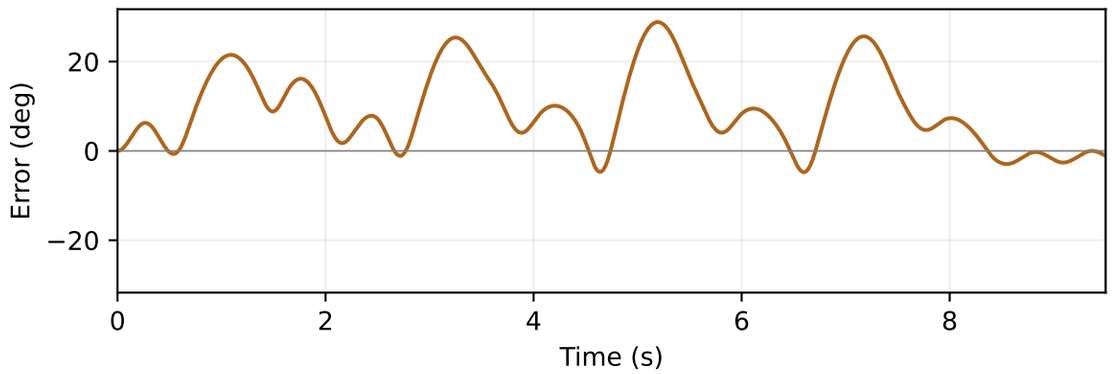
Force cap: 80 N | Controller step: 0.01 s | Angle: 20 to 80 degrees | Muscle excitation: 0.01

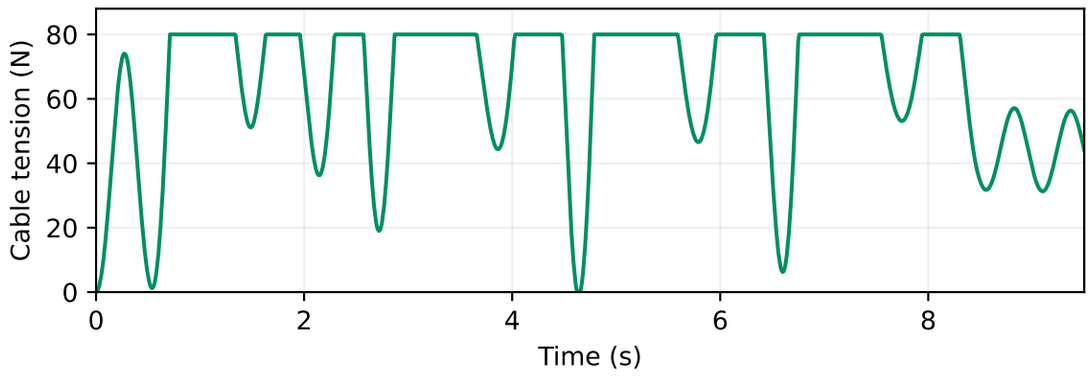
Leg times (s), alternating lift/lower: 1, 1, 1, 1, 1, 1, 1, 1

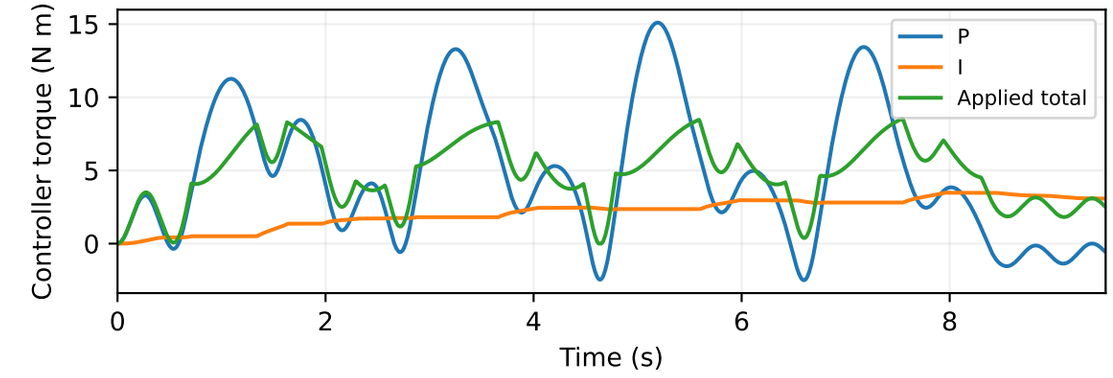
LIVE | t=9.50 s | FINAL HOLD | cycle 4 | leg 0 s

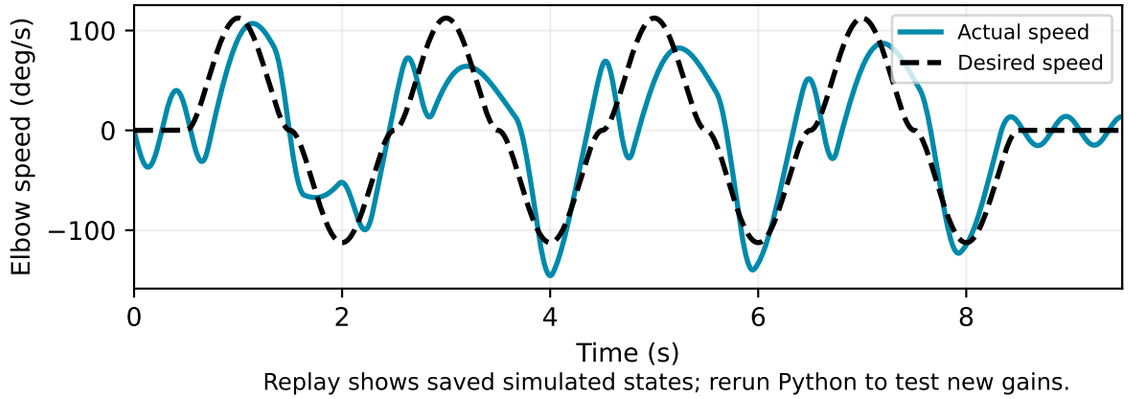
Speed: desired +0.0, actual +13.9 deg/s | error -1.1 deg | force 44.1 N | within force range

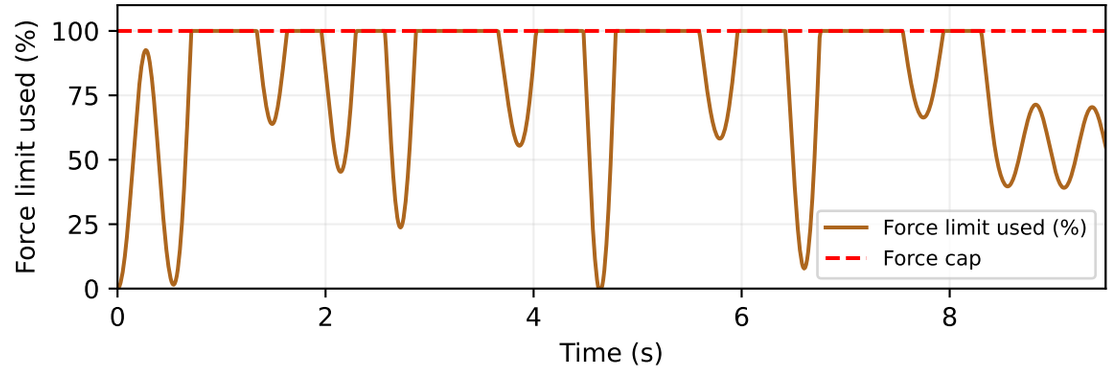












Replay shows saved simulated states; rerun Python to test new gains.
