PI simulation complete — press Replay to present the result

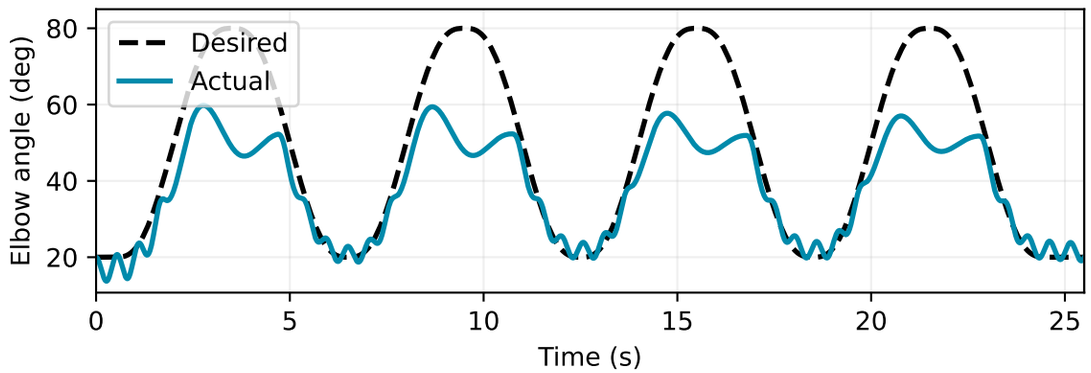

Dumbbell: 2 kg | PI: Kp=30, Ki=15 | Kd=0 (no derivative) | Kv=0

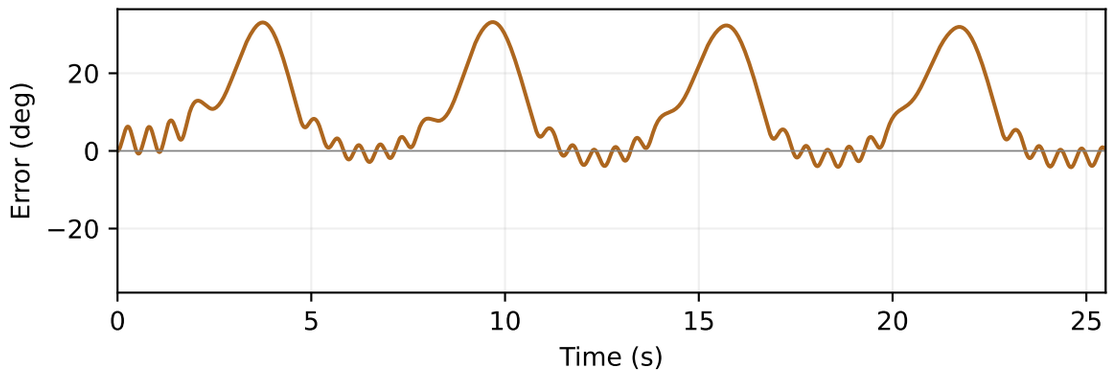

Force cap: 80 N | Controller step: 0.01 s | Angle: 20 to 80 degrees | Muscle excitation: 0.01

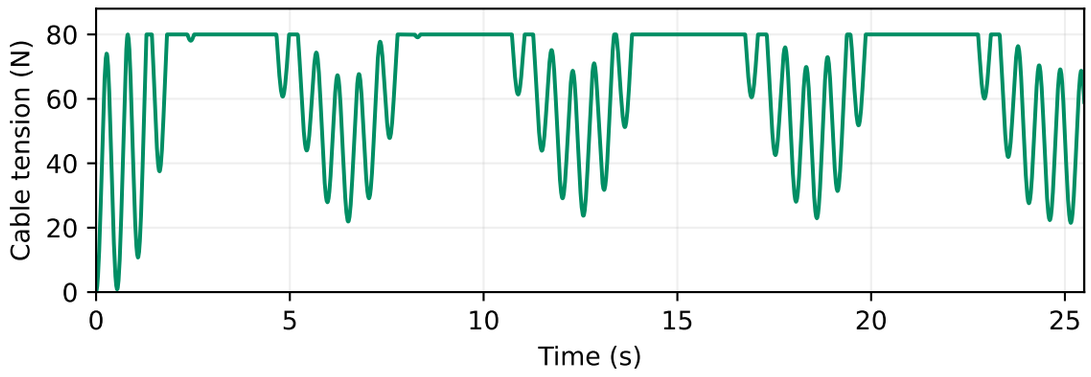

Leg times (s), alternating lift/lower: 3, 3, 3, 3, 3, 3, 3, 3

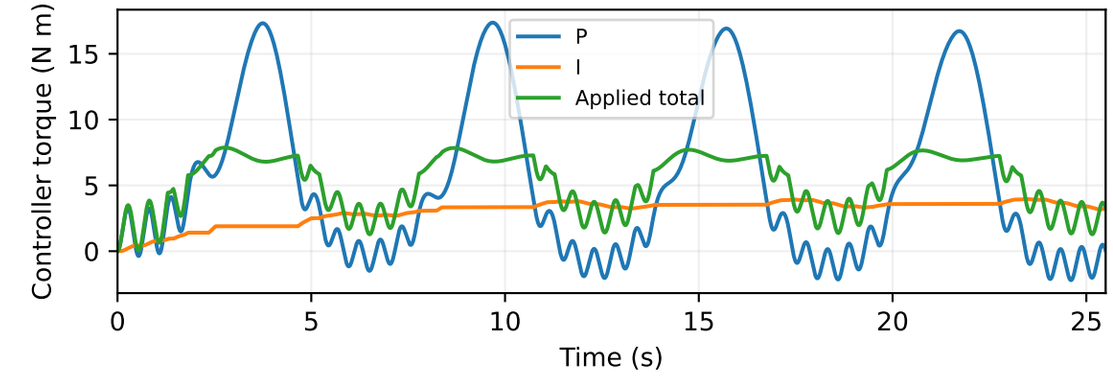

LIVE | t=25.50 s | FINAL HOLD | cycle 4 | leg 0 s

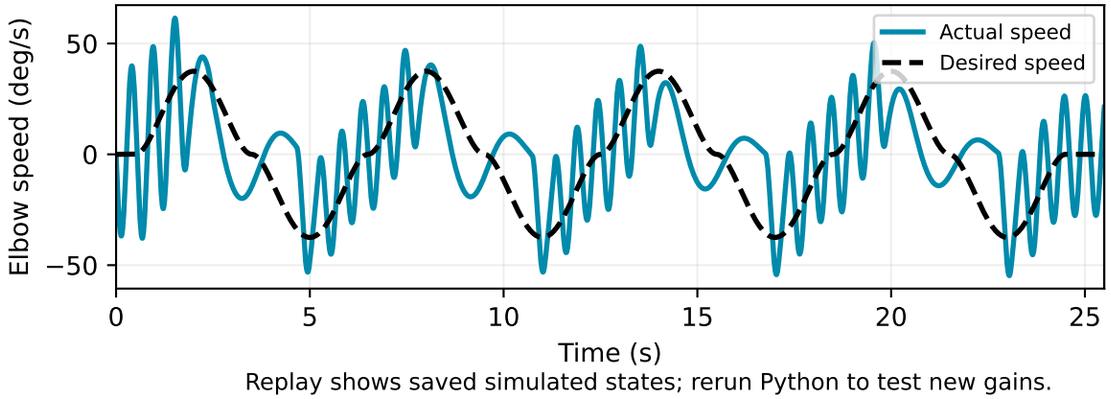

Speed: desired +0.0, actual +21.2 deg/s | error +0.1 deg | force 59.0 N | within force range

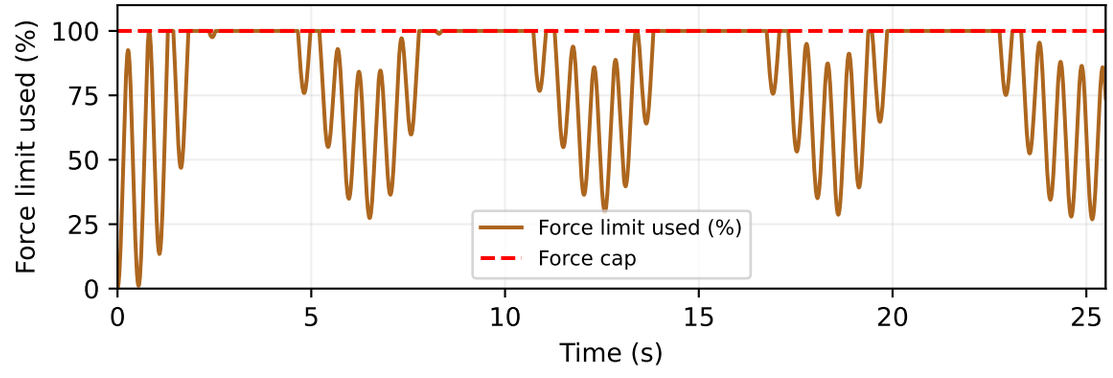

Replay shows saved simulated states; rerun Python to test new gains.
